EDITORIAL

Gross is back above its limit as TMT shorts grow; risk is concentrated in TMT

Gross rose 6pp to 228%, above the 200% limit, as TMT and Materials added shorts; net fell to 18%.

TMT holds 16% of gross but 25% of volatility: its two largest longs, both AI-capex names, top the VaR contributors and trade almost as one.

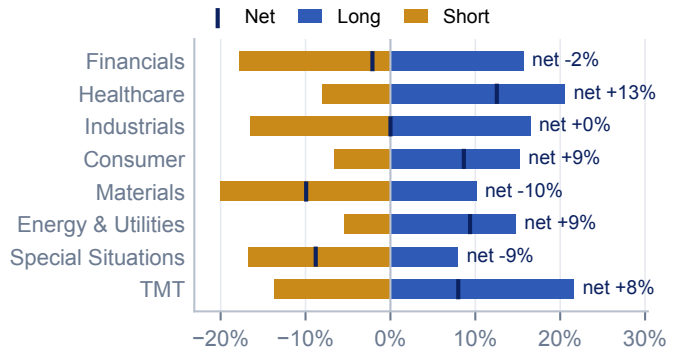

What we are watching:

- Gross breach: TMT and Materials PMs to reduce or justify.
- TMT earnings w/c 8 December.
- Momentum reversal if rate-cut expectations shift.

Exposure by team
